

MECHANICAL REINFORCING BAR SPLICING SYSTEM

transCOUP Coupler

PROPERTIES

- Meets or exceeds the requirements of major international building codes
- A wide range of international rebar grades and deformation patterns can be used
- Upset Parallel Thread System eliminates losing of connection strength via slipping
- Installs easily and fast
- Slim design reduces concrete cover
- Available in sizes 12 mm - 40 mm
- Allows simple visual inspection

Transcoup Couplers are designed to splice different diameter bars where at least one bar can be rotated and moved freely in its axial direction. The couplers are machined to have parallel threads inside which create a mechanical connection of two corresponding reinforcing steel.

Typical applications include splicing of the column bars (or shearwalls), splicing of the beam bars, future extensions and segmental pours of concrete.

Transcoup couplers are designed to meet or exceed major international building codes and Department of Transportation requirements, including:
